GAME NOTES

Diriangén

4 - 2

Plaza Amador

Referee
Myriam Marcotte

This is the second time Diriangén have won by four or more goals in the Concacaf Central American Cup, following their 4-2 victory against Herediano last year in the group stage.

Before Kairo Walters' red card in the 47th minute, Plaza Amador had more shots (11-7) and possession (77%-23%) than Diriangén; however, the Nicaraguan side scored three goals during that period.

This is the first time a Nicaraguan team has beaten a Panamanian side by three or more goals in the Concacaf Central American Cup.

Plaza Amador had 24 attempts against Diriangén today. This is the third time since 2025 that a team has had that many attempts in a Concacaf Central American Cup match and failed to earn any points.

Diriangén's Bruno Barja scored and assisted in their win against Plaza Amador, becoming the first Uruguayan player to achieve this feat in the Concacaf Central American Cup since at least 2025.

ATTACKING SEQUENCES INVOLVEMENTS

Shot
Chance Created
Build Up to Shot

Sequences are a football metric that quantifies the plays within a team's ball possession.

It begins when a player performs a controlled action with the ball, such as a pass or dribble, and ends at the end of that play, either with a defensive action by the opposing team, a break in play, or a shot.

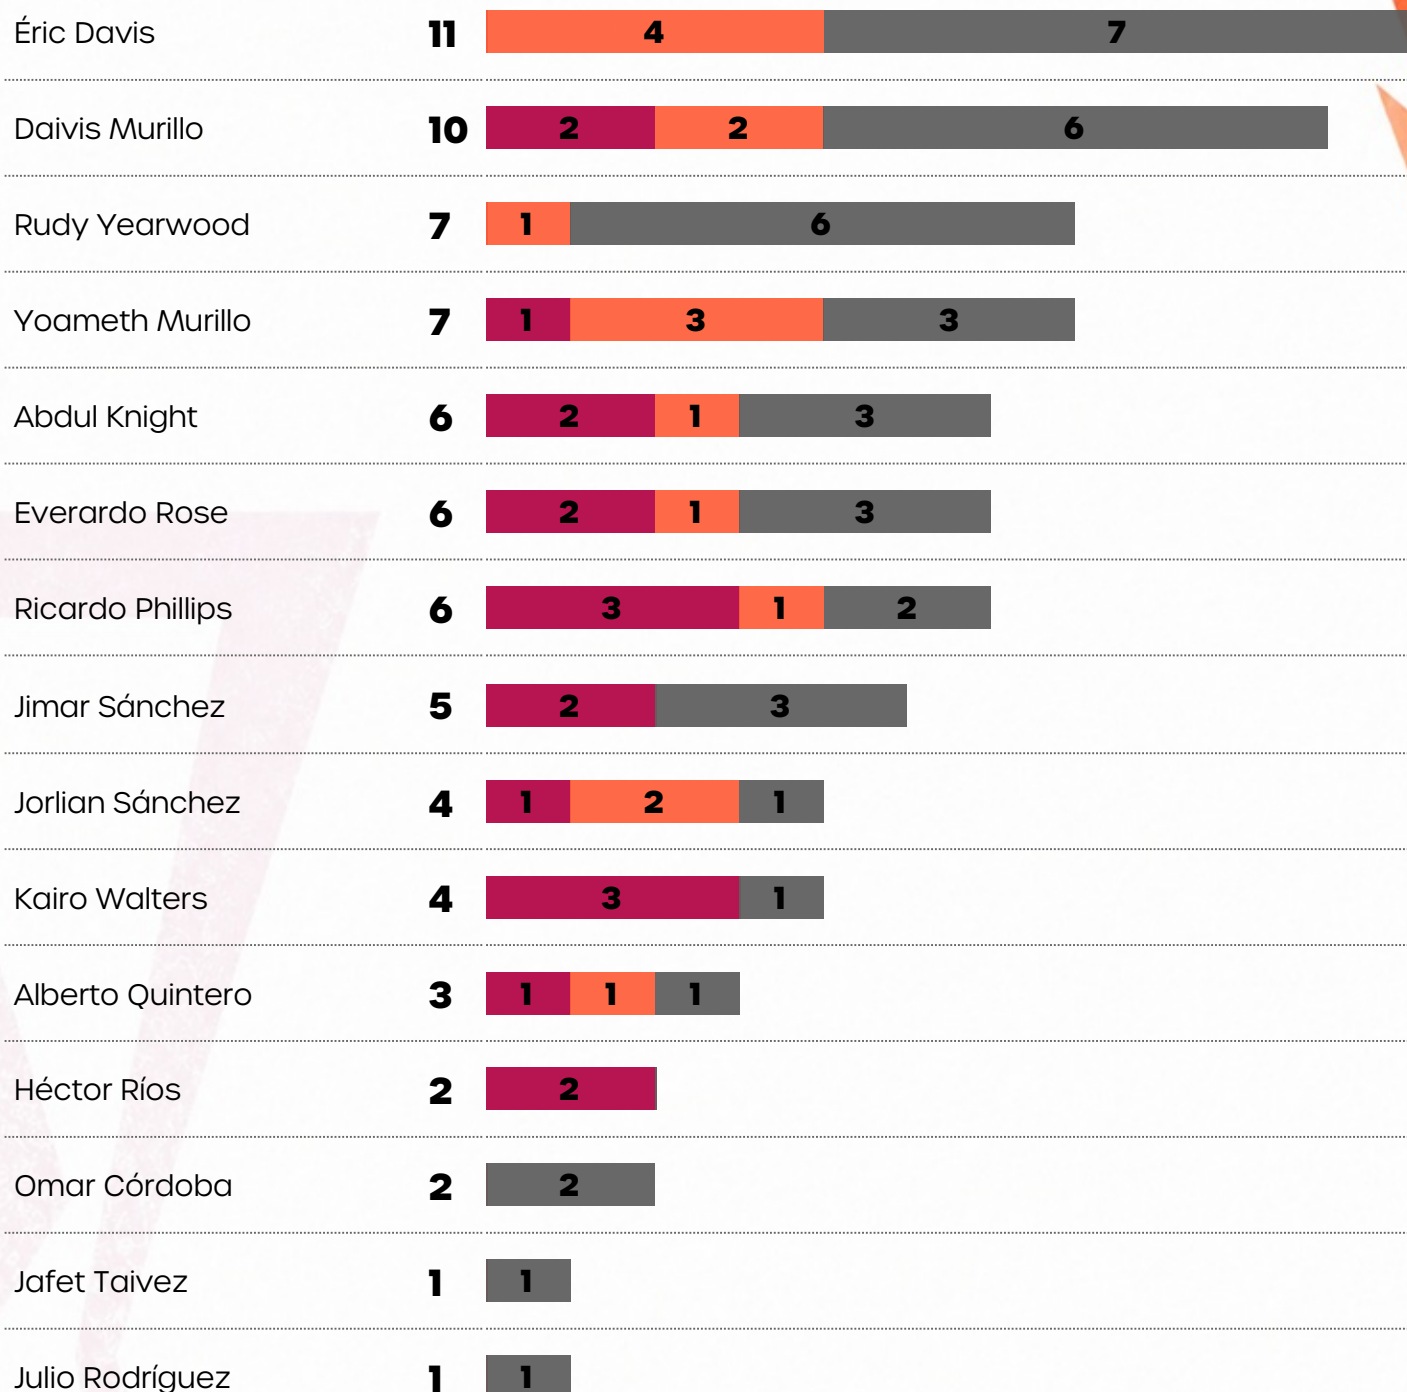

During a sequence, the participation of each player who performs an action with the ball, whether it is a pass, a dribble or a shot, is recorded. If the sequence culminates in a shot, the player is credited with participating in a shot ending sequence.

This participation may be the shot itself, the pass that led to the shot (chance created) or a previous touch in the build up ..

This participation may be the shot itself, the pass that led to the shot (chance created) or a previous touch in the build up ..

SEQUENCES INVOLVEMENTS & xG CHAIN

Open Play Sequence Involvement The number of unique open play sequences that a player was involved in.
(Note: these are unique because multiple involvements in a single sequence will only count as one involvement).

xG Sequence Involvement (xG Chain) (xG Chain) The total xG value of unique open play shot or goal ending sequences that a player was involved in.
