ATTACKING SEQUENCES INVOLVEMENTS

- Shot
- Chance Created
- Build Up to Shot

Sequences are a football metric that quantifies the plays within a team's ball possession.

It begins when a player performs a controlled action with the ball, such as a pass or dribble, and ends at the end of that play, either with a defensive action by the opposing team, a break in play, or a shot.

During a sequence, the participation of each player who performs an action with the ball, whether it is a pass, a dribble or a shot, is recorded. If the sequence culminates in a shot, the player is credited with participating in a shot ending sequence.

This participation may be the shot itself, the pass that led to the shot (chance created) or a previous touch in the build up of the sequence. The calculation excludes set pieces.

ATTACKING SEQUENCES INVOLVEMENTS

■ Build Up to Shot

Sequences are a football metric that quantifies the plays within a team's ball possession.

It begins when a player performs a controlled action with the ball, such as a pass or dribble, and ends at the end of that play, either with a defensive action by the opposing team, a break in play, or a shot.

During a sequence, the participation of each player who performs an action with the ball, whether it is a pass, a dribble or a shot, is recorded. If the sequence culminates in a shot, the player is credited with participating in a shot ending sequence.

This participation may be the shot itself, the pass that led to the shot (chance created) or a previous touch in the build up of the sequence. The calculation excludes set pieces.

SEQUENCES INVOLVEMENTS & xG CHAIN

Open Play Sequence Involvement The number of unique open play sequences that a player was involved in. (Note: these are unique because multiple involvements in a single sequence will only count as one involvement).

xG Sequence Involvement (xG Chain) The total xG value of unique open play shot or goal ending sequences that a player was involved in.
